**Period-3 No-SQL**
**MongoDB + mongoose and Redis.**

Explain, generally, what is meant by a NoSQL database.

Explain how databases like **MongoDB** and **redis** would be classified in the NoSQL world

Explain, using a relevant example, how redis (or a similar data store) can increase scalability (drastic) for a server, using server side sessions

**If you have time:**

Explain, using a relevant example, a full MEAN application including relevant test cases to test the REST-API (not on the production database)
